

CSCI-101 Programming I
March 25 Quiz

Name _____

For questions 1 – 5, DO NOT declare a class or a main method, just provide the code necessary to answer the question.

1. Declare a variable named age that holds a decimal number and is initialized to the value 10.5.
2. Declare a variable named initial that holds a character and is initialized to the value Z.
3. Using a while-loop print the integers between 3 and 13 (inclusively).
4. Using a while-loop print the even integers (inclusively) between 5 and 35.
5. Using a while loop compute the sum of the integers between 1 and 10 and print the sum to the screen.
6. Write a complete program in the Java programming language that prints to the screen the string of characters "Happy Birthday!".
