

CSCI-101 Programming 1

Pre-lab for week of October 10

Instructions

Write a program that creates the following methods and tests the methods by invoking them in the main method.

Method Descriptions

boolean contains(int[], int): returns true if the array in the first parameter contains the integer in the second parameter; otherwise returns false.

boolean isEmpty(int[]): returns true if the array in the first parameter has length 0; otherwise returns false.

int[] clone(int[]): returns a new array of integers having the same length and the same values as the array that is passed into the method.
